### Vector Journal entry

I revisited Vectors from the last time I did them at my community college. I was somewhat nervous because I haven't done them in a while but I retained most of the knowledge I learned at CC.

I liked the dot products because I liked to multiply numbers and add them together to find how the lines and potentially images move from one point to another. There was also the cross product where you factor out i,j, or k to find the distance between two points of the vector.

I guess I didn't really like trying to program them on VS code because it was somewhat new to me and I wasn't too sure how it would look when programming into VS studio.

However, I eventually got it running and saw the dancing Homer

Tests required to pass to earn an "A"

Testing from-to... **Passed**

Testing projection... **Passed**

**Passed 14 tests out of 14**

Simpsons and had a chuckle!
